

AMENDMENTS TO THE SPECIFICATION

Please replace the paragraph no. 21 with the following amended paragraph:

Second, as compared to a conventional Internet-based computing environment, since wired/wireless digital information appliances (for example, refrigerators, air conditioners, TVs, ~~PDSs~~-PDAs and the like) have limited computing abilities and limited compatibilities with various multimedia DRM service protocols relative to a PC or the like, it is difficult to apply the conventional DRM system to the intranet in which these wired/wireless digital information appliances are clients.

Please replace the paragraph no. 43 with the following amended paragraph:

Consistent with the present invention, the multimedia content management method may further comprise decrypting the encrypted multimedia contents; decrypting the encrypted license; and checking whether the decrypted multimedia contents are executed in the client so as to be suitable for the decrypted license.
